

Attaching a CID tooth bar to your existing bucket means you are ready for some serious digging. Simply drill a hole on each side of your bucket and bolt on the tooth bar. The shanks on the tooth bar hook onto your existing cutting edge, where all the pressure is applied. The bolts simply hold the tooth bar on the bucket. Our tooth bar teeth are all replaceable, so you don't have to worry about breaking one.

- Replaceable teeth
- Available Sizes: Any Size Needed
