**ASSEMBLY, USE AND SPARE PARTS LIST
CENTER RAKE WHEELS RH-LH KIT MKE**

PART NO 250.462/b

04-2019

Assembly Instructions

Examples of general measurements for identifying assembly accessories according to type.

To make it easier to identify the assembly accessories (nuts, bolts, washers, pins, etc.) on the basis of the general dimensions and the type, we provide a diagram that shows you the accessory parts to which the measurements refer as given in the various steps of assembly.

The drawings are schematic and do not always faithfully reproduce the accessories, but they will be of help in identifying them correctly.

Note: the accurate measurements are those given in mm; those given in inches are rounded off, and for threads the size in inches is given only as an aid, as it does not accurately describe the thread.

You can see the following examples:

Box “A”: shows springs that will be identified by the wire diameter, the outside diameter and the length, thus in this case $\emptyset 3\text{-}\emptyset 18 \times 110$ ($\emptyset 0.12\text{''}\text{-}\emptyset 0.71\text{''} \times 4.33\text{''}$)

Box “B”: shows handles, spring pins, split pins, etc. that will be identified by the diameter of the shank and the length, thus in this case $\emptyset 8 \times 50$ ($\emptyset 0.12\text{''} \times 1.97\text{''}$)

Box “C”: shows shims, bushings, spacers and washers in general that will be identified by the inside diameter, the outside diameter and the length and/or the thickness (for washers), thus in this case $\emptyset 18\text{-}\emptyset 35 \times 30$ ($\emptyset 0.71\text{''}\text{-}\emptyset 1.38\text{''} \times 1.18\text{''}$) or for washers $\emptyset 18\text{-}\emptyset 35 \times 3$ ($\emptyset 0.71\text{''}\text{-}\emptyset 1.38\text{''} \times 0.12\text{''}$).

Box “D”: shows retaining rings for internal housings/bores that will be identified by the diameter of the bore preceded by an I, thus in this case I35-1.38”, and for external shafts that will be identified by the diameter of the pin preceded by an E, thus in this case E35-1.38”.

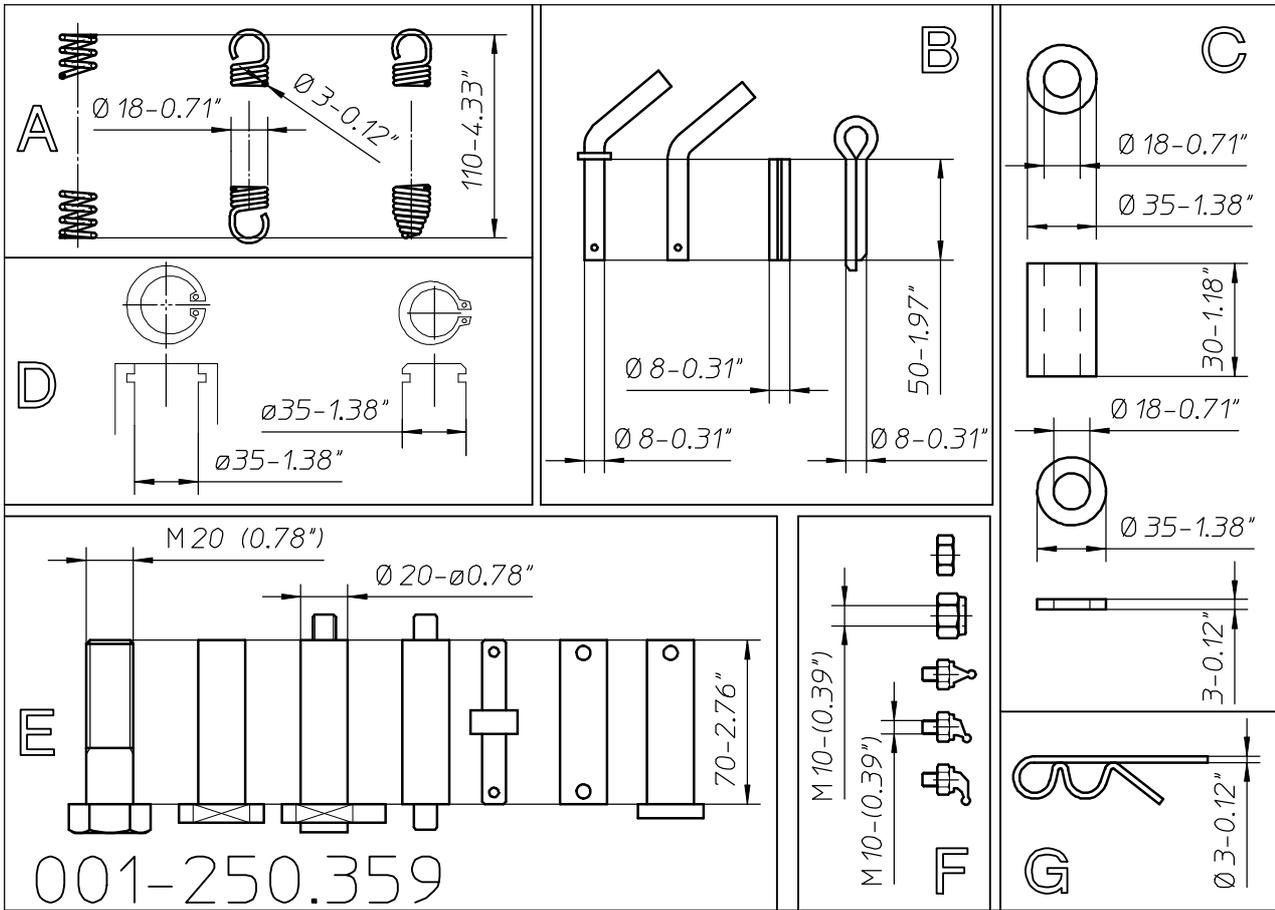

Box “E”: shows pins, bolts, etc. that will be identified by the outside diameter (thread diameter for bolts) and the length, thus in this case $\emptyset 20 \times 70$ ($\emptyset 0.78\text{''} \times 2.76\text{''}$) or for bolts M20 x 70 (0.78” x 2.76”).

Box “F”: shows nuts and grease nipples that will be identified by the thread diameter, thus in this case M10 (0.39”).

Box “G”: shows R-clips that will be identified by the diameter of the shank, thus in this case $\emptyset 3$ ($\emptyset 0.12\text{''}$).

Assembly Instructions

Examples of general measurements for identifying accessories for assembly according to type.

For tightening torques, see the table below (the class of the material is normally stamped on the head of the bolts).

MINIMUM HARDWARE TIGHTENING TORQUES

IN NEWTON-METERS (FOOT POUNDS) FOR NORMAL ASSEMBLY APPLICATIONS

METRIC NON-FLANGED HARDWARE AND LOCKNUTS

NOMINAL SIZE	CLASS 5.8		CLASS 8.8		CLASS 10.9		LOCKNUT CL.8 W/CL.8.8 BOLT
	UNPLATED	PLATED W/ZnCr	UNPLATED	PLATED W/ZnCr	UNPLATED	PLATED W/ZnCr

NOTE: Torque values shown with * are inch pounds.

ASSEMBLY

The procedure for the assembly of the center rake wheel kit is the same whether it is done at the same time as the assembly of the machine or if it is done on a machine that is already working. Assembly must be done in a suitable area by qualified personnel equipped with the proper clothing, protective equipment and tools necessary for the job. Only authorized persons should be in the assembly area. All the instructions and recommendations found in the assembly, use and maintenance manual for the machine are valid also for this assembly. The manual must be consulted every time you work on or with the machine.

NOTE: What we are about to describe is an approximate assembly procedure. Each person, based on their experience and on the tools they have to work with, may vary the assembly steps to suit their needs. **Always use great caution because the assembly steps are dangerous.**

Assembly sequence

1) DANGER

NB: clean the holes A-B
First of all insert the bushings 1 into seats A-B of the drawbar. Next attach supports 2 to seat B on the drawbar using pin 3, shims 4, washer 5 and nut 6. Attach supports 7 (RH) and 8 (LH with seat C) to seat A on the drawbar using pin 3, shims 4, washer 5 and nut 6. At this stage do not fully tighten nuts 6.

In this step, you will use:

Item 1: 4 bushings $\varnothing 30-34 \times 20$ (1.18"-1.34" x 0.79")

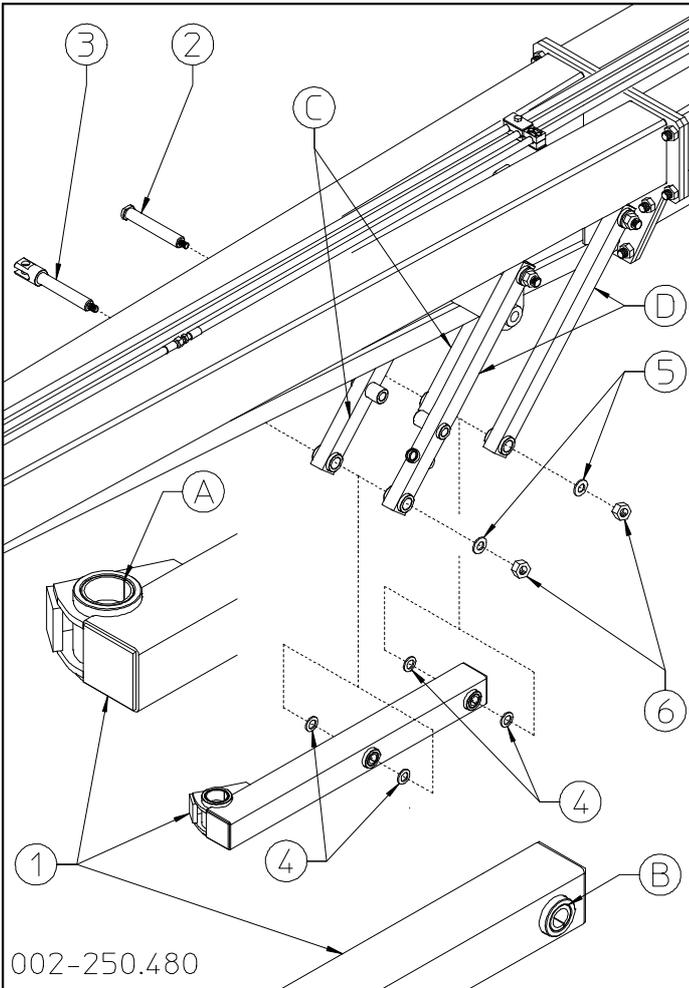

Item 3: 2 pins $\varnothing 30 \times 222$ (1.18" x 8.74")

Item 4: 4 shims $\varnothing 30.5-40 \times 1$ ($\varnothing 1.2"-1.57"$ x 0.04")

1) DANGER

Item 5: 2 washers $\varnothing 17-40 \times 4$ ($\varnothing 0.67"-1.57"$ x 0.16")

Item 5: 2 nuts M16 (0.63")

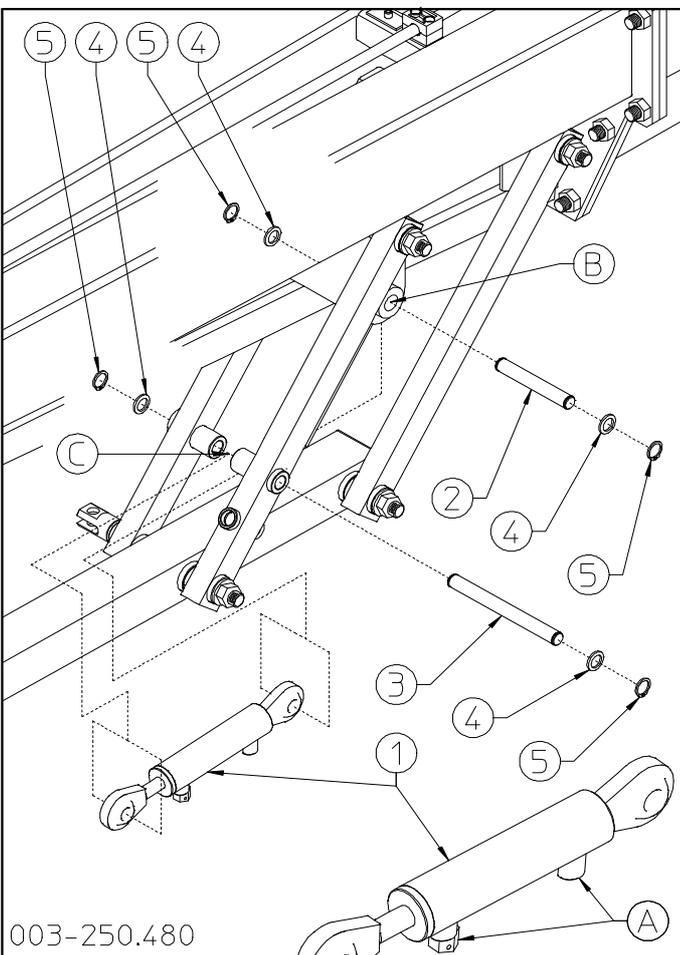

2) DANGER

First of all check to make sure the manufacturer has applied the bushings A (two) and bushings B (two + two) to the seats on support 1. Next attach support 1 to the seats on RH supports C and LH supports D using pins 2, shims 3, washers 4 and nuts 5. At this point the nuts 5 (including nuts 6 in the preceding step) can be fully tightened.

In this step, you will use:

- Item 2: 1 pin $\varnothing 30 \times 222$ (1.18"x8.74")
- Item 3: 1 pin $\varnothing 30 \times 222$ with fork (1.18"x8.74")
- Item 4: 4 shims $\varnothing 30.5-40 \times 1$ ($\varnothing 1.2''-1.57'' \times 0.04''$)
- Item 5: 2 washers $\varnothing 17-40 \times 4$ ($\varnothing 0.67''-1.57'' \times 0.16''$)
- Item 6: 2 nuts M16 (0.63")

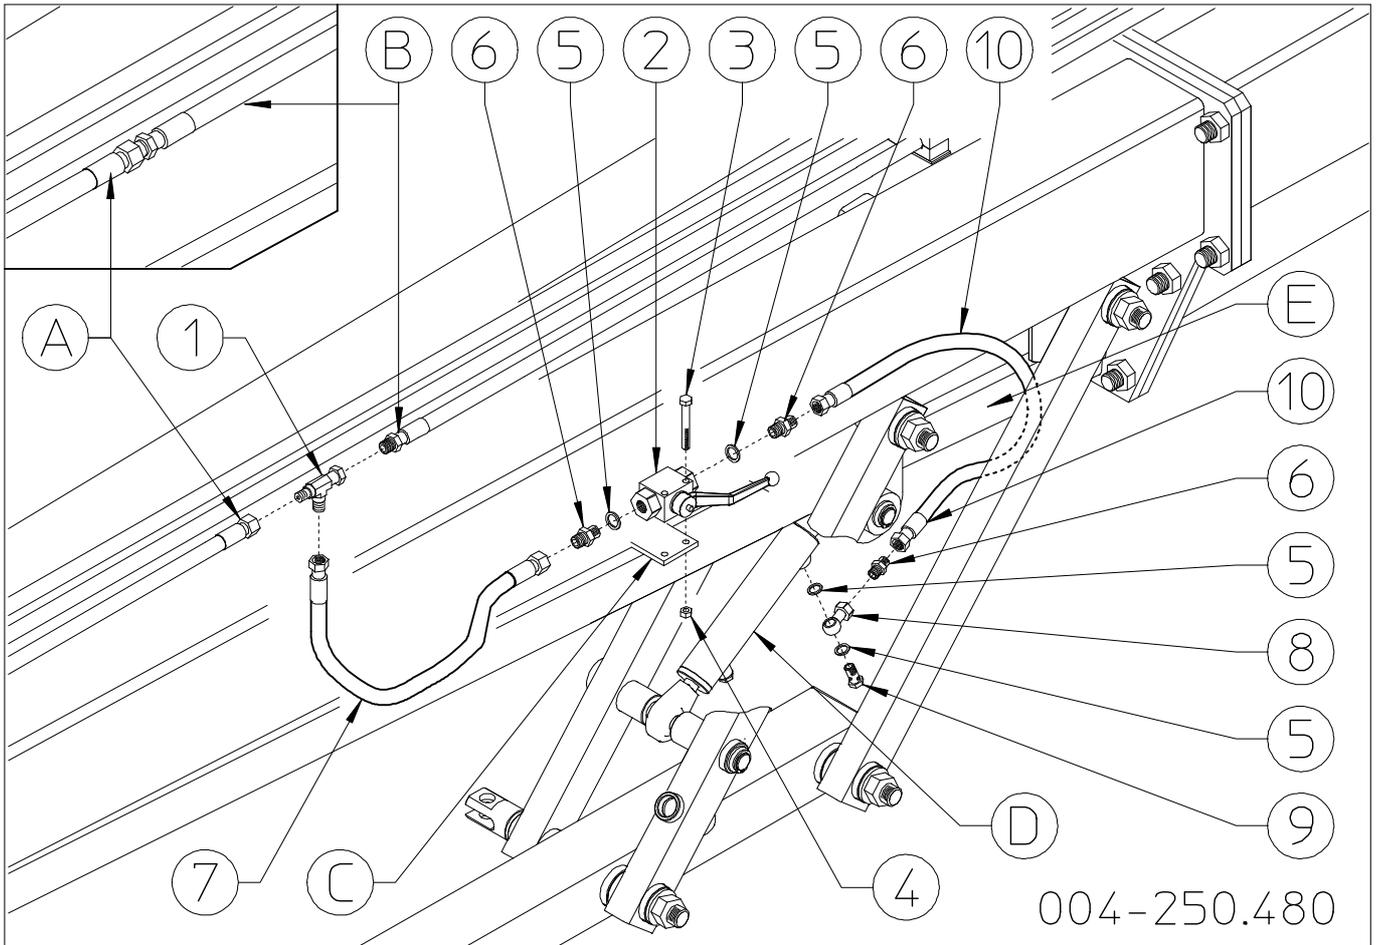

3) DANGER

Cylinder 1 is mounted with the oil ports A facing downward. Check to make sure that the manufacturer has applied the vent plug on oil port A on the shaft side. Attach the rear end of cylinder 1 to seat B on the drawbar using pin 2, shims 4 and retaining rings (Seeger) 5. Attach the shaft side of cylinder 1 to seat C on the supports, using pin 3, shims 4 and retaining rings (Seeger) 5.

In this step, you will use:

- Item 2: 1 pin $\varnothing 22 \times 102$ ($\varnothing 0.87'' \times 4.02''$)
- Item 3: 1 pin $\varnothing 22 \times 232$ ($\varnothing 0.87'' \times 9.13''$)
- Item 4: 4 shims $\varnothing 22.5-32 \times 0.5$ ($\varnothing 0.88''-1.26'' \times 0.02''$)
- Item 5: 4 retaining rings (Seeger) E22 (0.87")

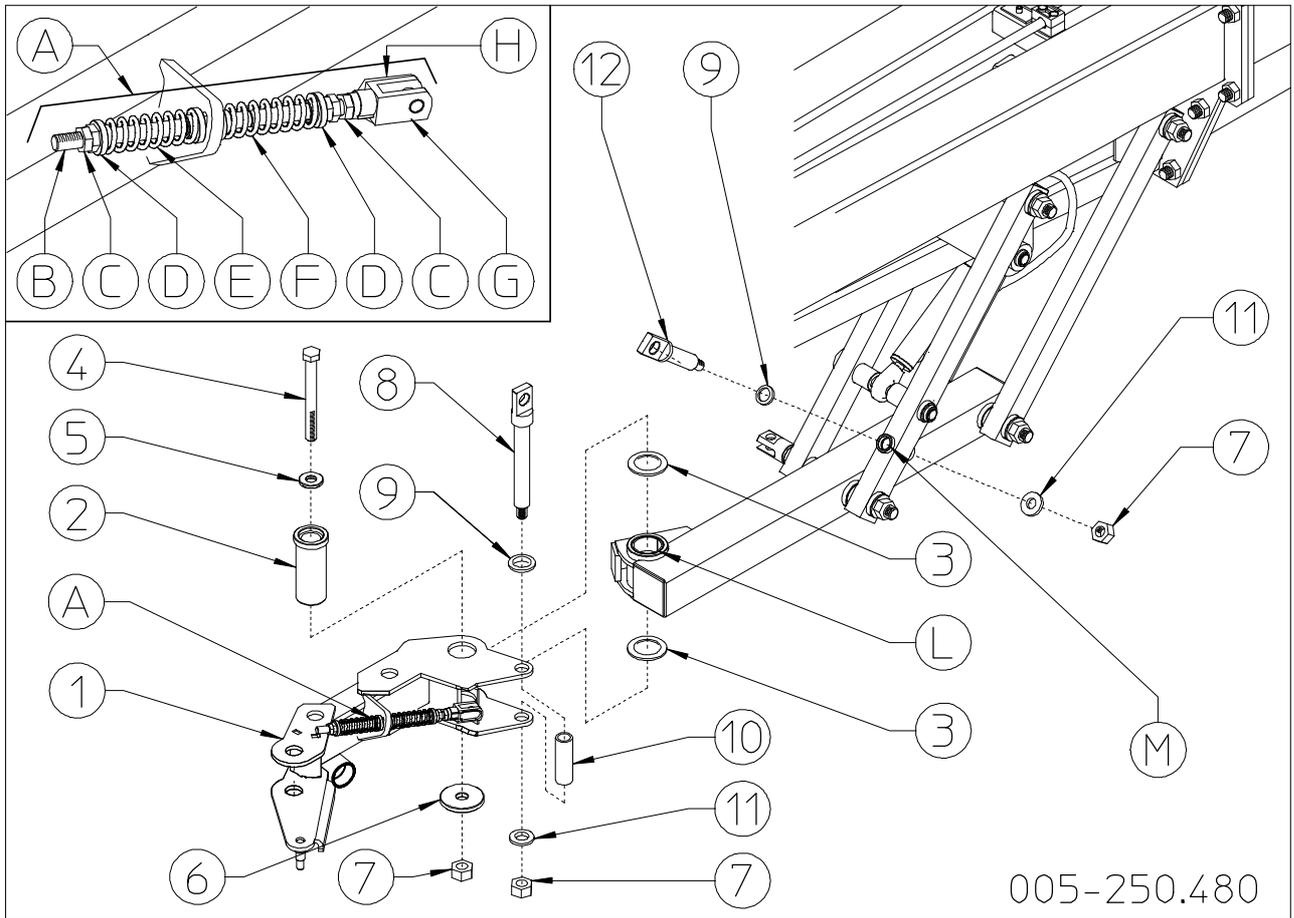

4) DANGER

Disconnect the hoses A-B running along the drawbar and insert coupling 1 without fully tightening it. Fasten valve 2 to bracket C on the drawbar using bolts 3 and nuts 4. Attach the washers 5 and nipples 6 to both sides of valve 2. Connect one end of hose 7 to coupling 1 and the other to nipple 6 without fully tightening it. Connect the banjo coupling 8 to the seat on cylinder D using washers 5 and screw-type coupling 9. Apply nipple 6 to coupling 8. Connect one end of hose 10 to nipple 6 on the cylinder, then have it pass alongside pipe E and in between the two pipes of the drawbar frame, until the other end reaches nipple 6 on valve 2, screwing it onto the nipple 6.

Note: Before fully fastening all the hoses, make sure that the line of the hose from one end to the other is not twisted and/or does not have sharp bends or kinks that cause it to be crushed or to have an unpleasant appearance.

In this step, you will use:

- | | | |
|-------------------------------------|---|---------------------------------------|
| Item 1: 1 T coupling M-F-M 3/4" JIC | - | Item 2: 1 valve 3/8" |
| Item 3: 2 bolts M5x45 (0.2"x1.77") | - | Item 4: 2 nuts M5 (0.2") |
| Item 5: 4 washers 3/8" | - | Item 6: 3 nipples 3/8" - 3/4" JIC |
| Item 7: hose 3/8" L.550mm (21.65") | - | Item 8: 1 banjo coupling 3/8" |
| Item 9: 1 screw-type coupling 3/8" | - | Item 10: 1 hose 3/8" L.1000mm (39.4") |

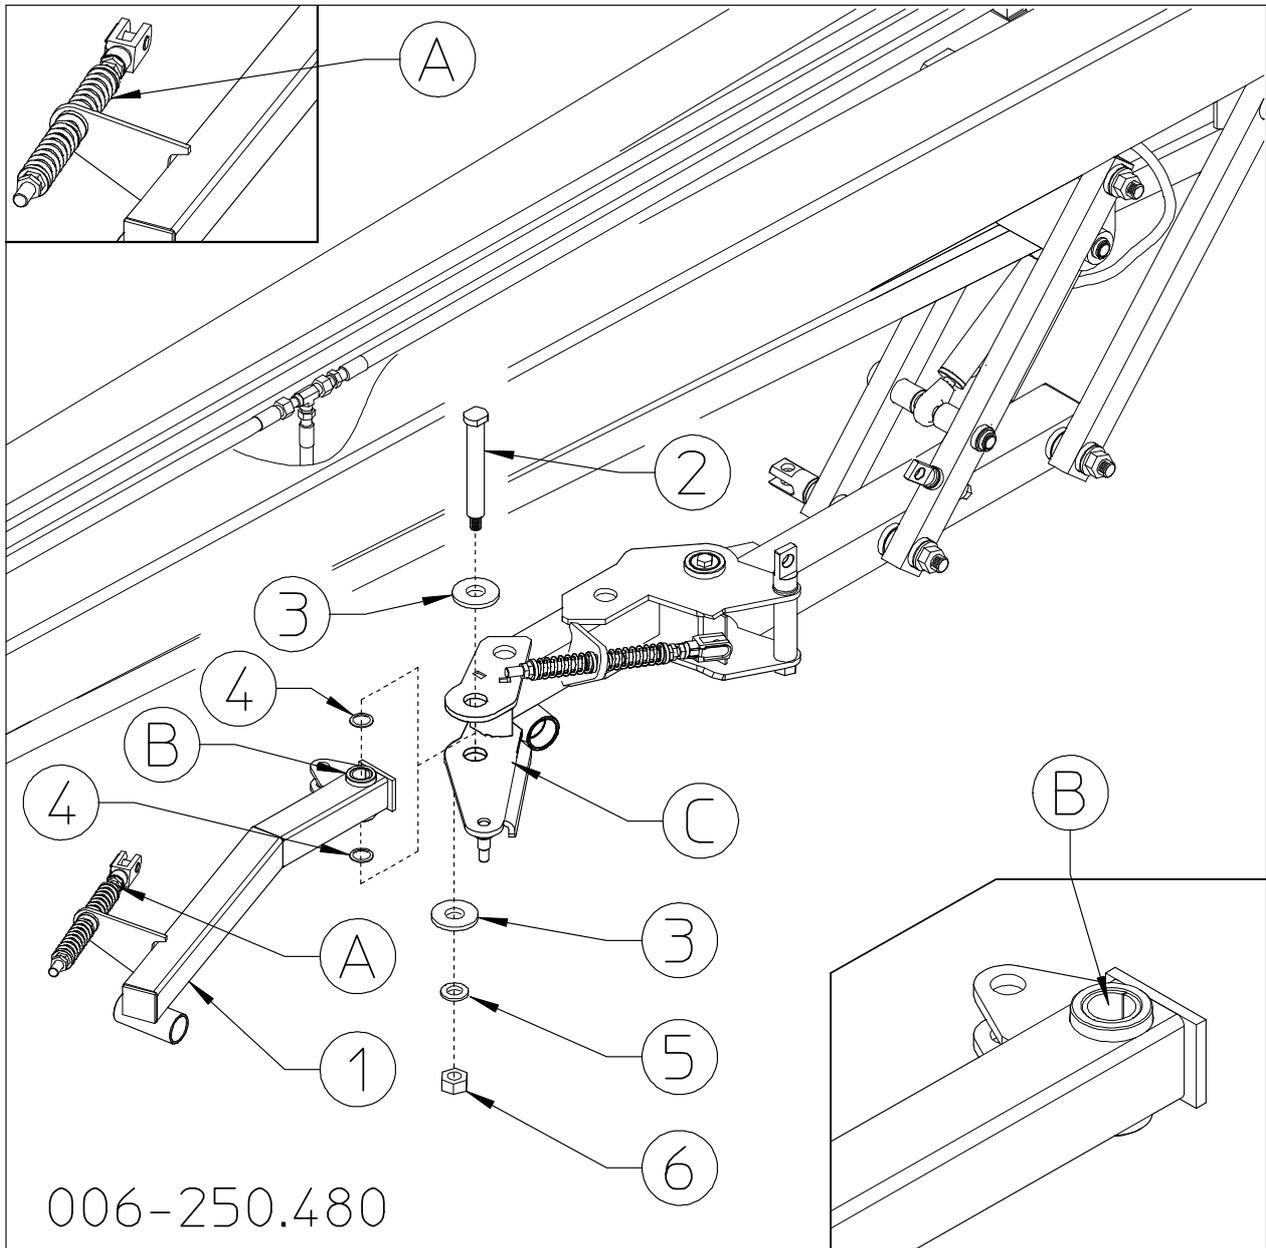

5) DANGER

Check to make sure that the manufacturer has installed one shock absorber A on the rake wheel section 1. Check that each shock absorber A is made up of a shaft B, five nuts C (two on the external side and three on the fork side), four bushes D (one at each end and two in the middle), one spring E (wire $\varnothing 5\text{-}\varnothing 0.197''$ on the external side), one spring F (wire $\varnothing 4.5\text{-}\varnothing 0.177''$ on the fork side), one fork G and one clip H. Connect section 1 to seat L on the support using pin 2, shims 3, bolt 4, washers 5-6 and nut 7. Check that section 1 turns freely. Assemble to the seat in section 1 the pin 8, shim 9, spacer 10, washer 11 and nut 7. Make sure that pin 8 rotates freely. Assemble to seat M on the support the pin 12, shim 9, washer 11 and nut 7. Make sure that pin 12 rotates freely.

In this step, you will use:

- Item 2: 1 pin $\varnothing 50$ (1.97")
- Item 3: 2 shims $\varnothing 50\text{-}70 \times 1$ ($\varnothing 1.97''\text{-}2.76'' \times 0.04''$)
- Item 4: 1 bolt M16x150 (0.63"x5.9")
- Item 5: 1 washer $\varnothing 17\text{-}40 \times 7$ ($\varnothing 0.67''\text{-}1.57'' \times 0.28''$)
- Item 6: 1 washer $\varnothing 17\text{-}65 \times 8$ ($\varnothing 0.67''\text{-}2.56'' \times 0.31''$)
- Item 7: 3 nuts M16 (0.63")
- Item 8: 1 pin $\varnothing 25 \times 117$ ($\varnothing 0.98'' \times 4.61''$)
- Item 9: 2 shims $\varnothing 25.5\text{-}35 \times 1$ ($\varnothing 1''\text{-}1.38'' \times 0.16''$)
- Item 10: 1 spacer $\varnothing 25.5\text{-}35 \times 100$ ($\varnothing 1''\text{-}1.38'' \times 3.94''$)
- Item 11: 2 washers $\varnothing 17\text{-}40 \times 4$ ($\varnothing 0.67''\text{-}1.57'' \times 0.16''$)
- Item 12: 1 pin $\varnothing 25 \times 81$ ($\varnothing 0.98'' \times 3.19''$)

6) DANGER

Check to make sure that the manufacturer has installed one shock absorber A on the rake wheel section 1. For the characteristics of the shock absorber A see previous point.

Check that the manufacturer has installed on the seats B two bushings.

Connect section 1 to seat C on the rear support using pin 2, shims 3-4, washers 5 and nut 6. Check that section 1 turns freely.

In this step, you will use:

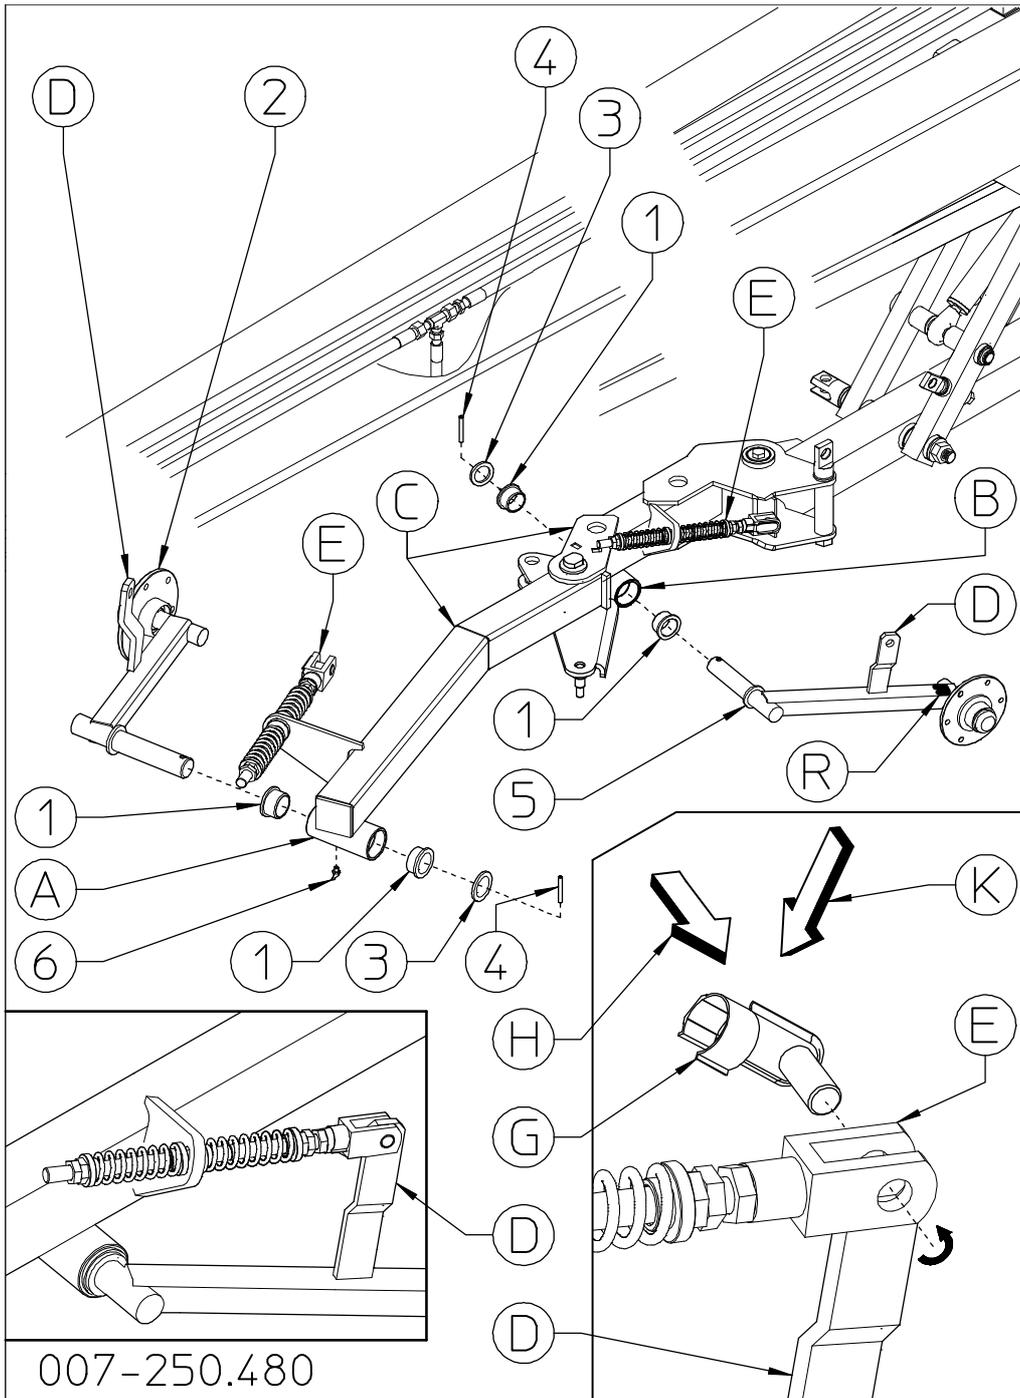

Item 2: 1 pin $\varnothing 30 \times 107$ (1.18"x4.21")

Item 3: 2 shims $\varnothing 30.5-50 \times 6$ ($\varnothing 1.2''-1.97'' \times 0.24''$)

Item 4: 2 shims $\varnothing 30.5-40 \times 1$ ($\varnothing 1.2''-1.57'' \times 0.04''$)

Item 5: 1 washer $\varnothing 17-40 \times 4$ ($\varnothing 0.67''-1.57'' \times 0.16''$)

Item 6: 1 nut M16 (0.63")

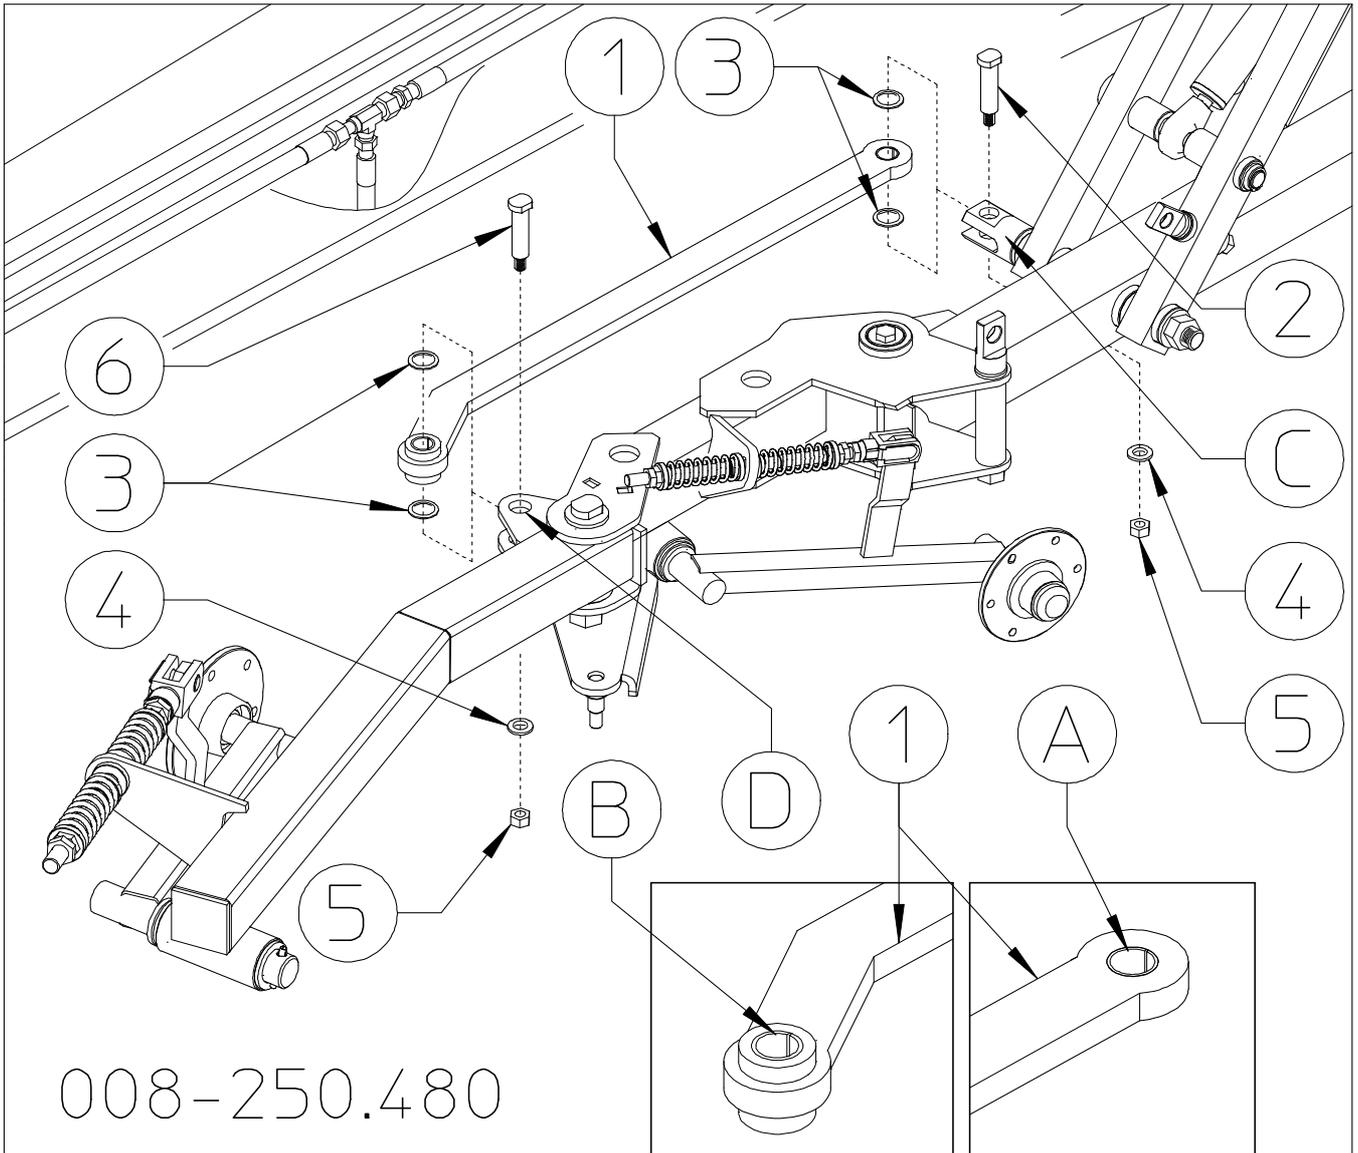

7) DANGER

Insert bushings 1 into seats A-B in sections C. Insert front arm 2 (unmarked) in seat A in section C and fasten with washer 3 and spring pin 4. Insert rear arm 5 (marked R) in seat B in section C and fasten with washer 3 and spring pin 4. Fit the grease nipples 6 to the proper seats A-B. Now connect the two shock absorber units E to levers D on arms 2-5. To do this you must first remove the clip G, then bring the fork of the shock absorber unit E to lever D and then fasten all with clip G, pushing it in the directions H-K.

7) DANGER

In this step, you will use:

- Item 1: 4 nylon bushings $\varnothing 35-42 \times 26$ ($\varnothing 1.38''-1.65 \times 1''$)
- Item 3: 2 washers $\varnothing 35-50 \times 5$ ($\varnothing 1.38''-1.97'' \times 0.2''$)
- Item 4: 2 spring pins $\varnothing 8 \times 50$ ($\varnothing 31'' \times 1.97''$)
- Item 6: 2 grease nipples M6x45° ($0.24'' \times 45^\circ$)

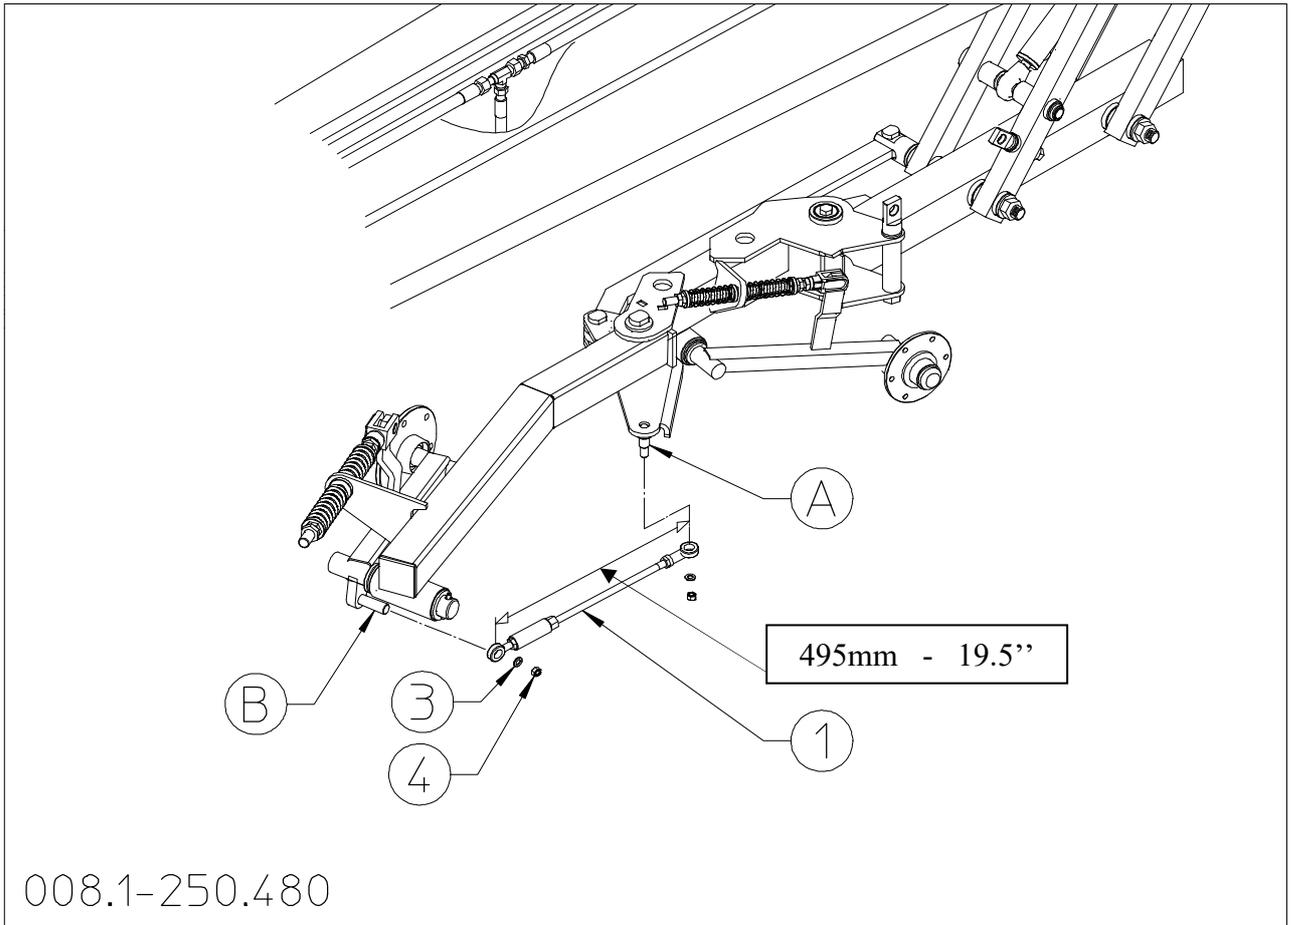

8) DANGER

First of all check to make sure the manufacturer has applied the bushing A and bushing B to the seats on tie rod 1. Next attach tie rod 1 to the seat C using pin 2, shims 3, washers 4 and nuts 5. Attach tie rod 1 to the seat D using pin 6, shims 3, washers 4 and nuts 5.

In this step, you will use:

- Item 2: 1 pin $\varnothing 20 \times 35$ ($\varnothing 0.79'' \times 1.38''$)
- Item 3: 4 shims $\varnothing 20.2-26 \times 0.5$ ($\varnothing 0.8''-1'' \times 0.02''$)
- Item 4: 2 washers $\varnothing 12-36 \times 2.5$ ($\varnothing 0.48''-1.42'' \times 0.1''$)
- Item 5: 2 nuts M12 (0.47'')
- Item 6: 1 pin $\varnothing 20 \times 48$ ($\varnothing 0.79'' \times 1.89''$)

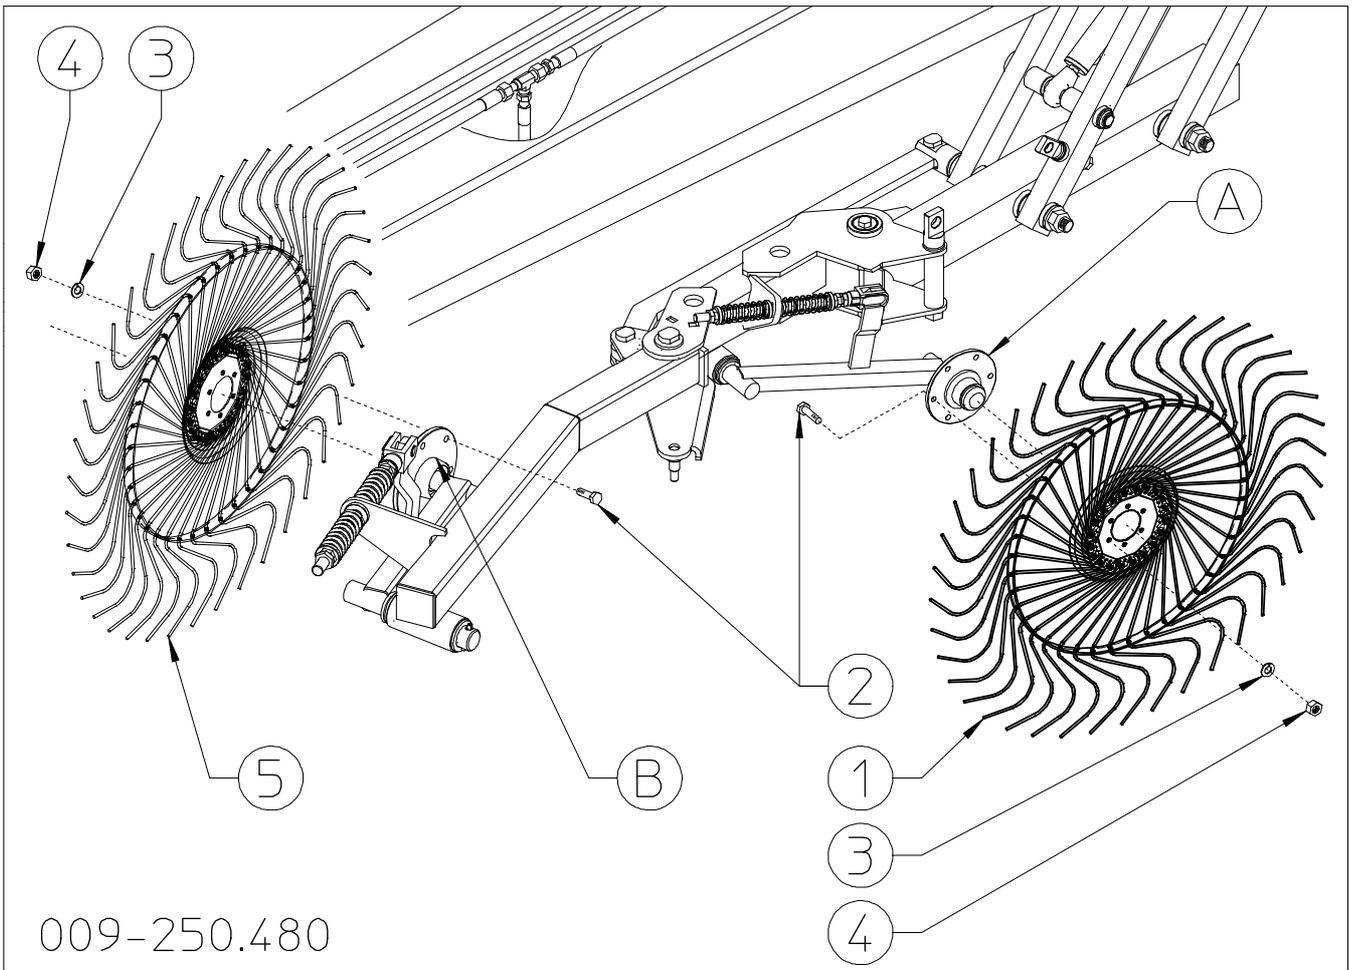

8.1) DANGER

Attach the tierod 1 to pin A on the support using washer 3 and nut 4.
Attach the tierod 1 to pin B on the wheel arm using washer 3 and nut 4.

In this step, you will use:

Item 3: 2 washers $\varnothing 12$ ($\varnothing 0.5''$)

Item 4: 2 nuts M12 (0.5'')

9) DANGER

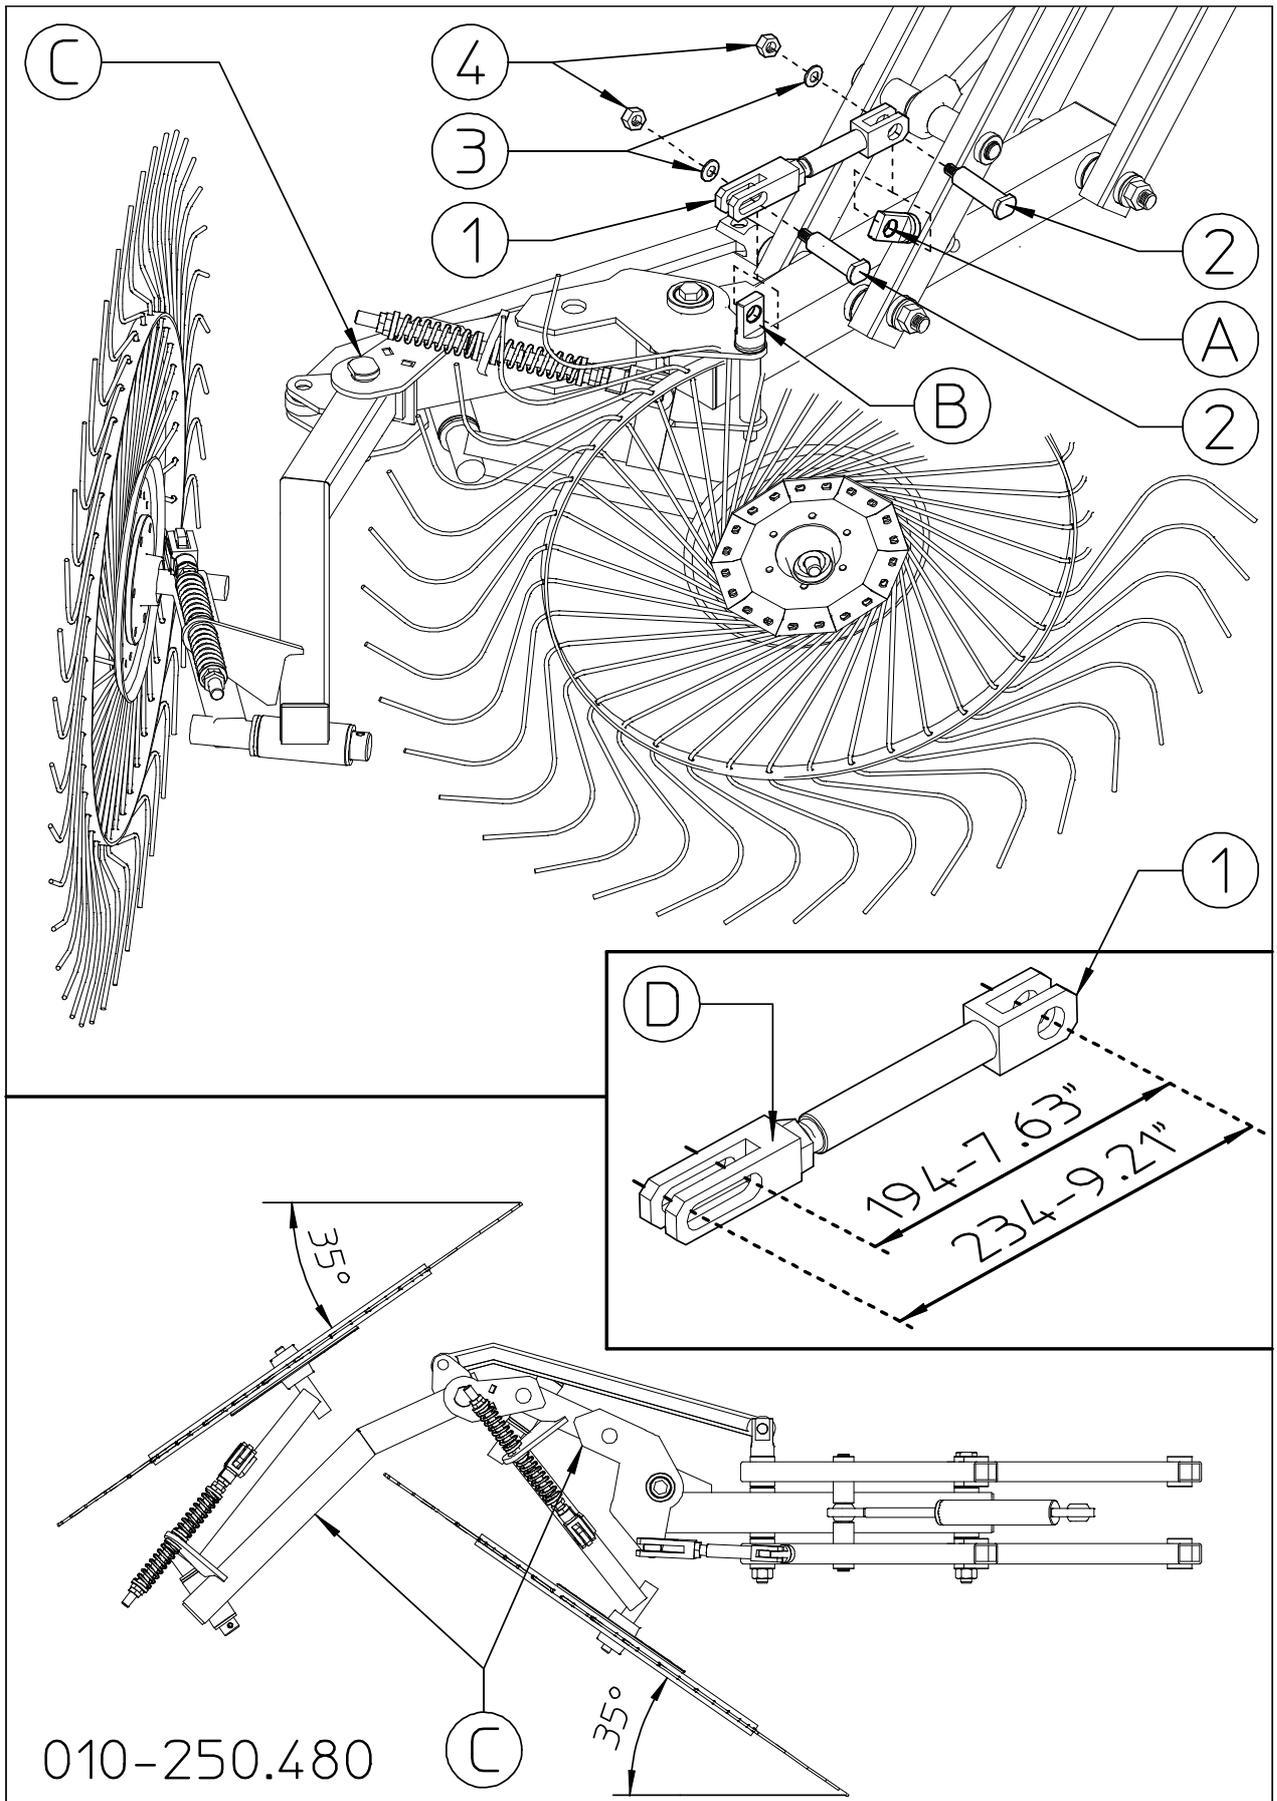

Attach the RH rake wheels 1 to hub A on the arm using bolts 2, washers 3 and nuts 4.
 Attach the LH rake wheels 5 to hub B on the arm using bolts 2, washers 3 and nuts 4.

In this step, you will use:

Item 2: 12 bolts M10x25 (0.39"x1.97")

Item 3: 12 split washers $\varnothing 10.5-17 \times 2.5$ ($\varnothing 0.41''-0.67'' \times 0.1''$)

Item 4: 12 nuts M10 (0.39")

10) DANGER

At this point tie rod 1 must be connected to pin A on the supports and to pin B on the rake wheel section C. First of all rake wheel section C on the right side of the machine must be pushed manually until it reaches the stop point. Now check that the tie rod 1 has been assembled to the correct measurement of 194mm-7.63" for linking pins A-B. Before proceeding with the installation, check that the distance between pins A-B is also 194mm-7.63". The installation is correct when the tie rod 1 links pins A-B in a barely forced manner, thus not allowing rake wheel section C to move back. If you have problems installing tie rod 1, you can make small adjustments to the fork with the slot and to nut D on the same. Note: The adjustments made must be very slight. If considerable adjustment (more than 2-3mm / 0.08"-0.11") is necessary to connect tie rod 1, it means that some component has not been correctly assembled or is defective. Bear in mind that tie rod 1 also serves to bring section C from its current working position to the transport position, therefore making considerable adjustment to the tie rod could cause the section to have the wrong transport position.

Now if all is correct, proceed with the attaching of tie rod 1.

Connect the welded fork side of tie rod 1 to pin A using pin 2, washer 3 and nut 4. Connect the fork with the slot on tie rod 1 to pin B on section C using pin 2, washer 3 and nut 4.

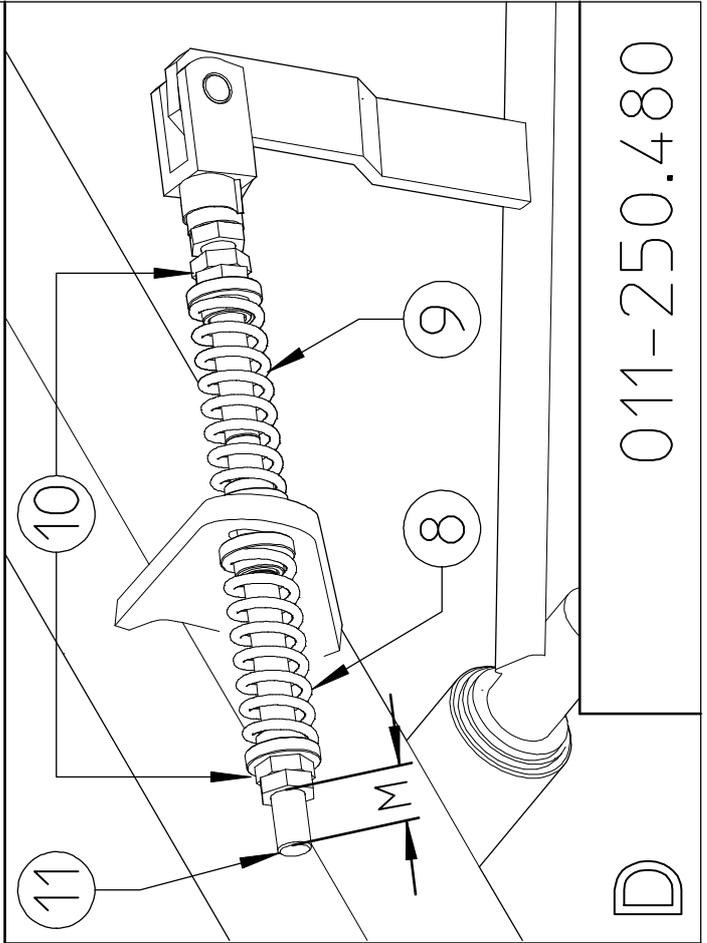

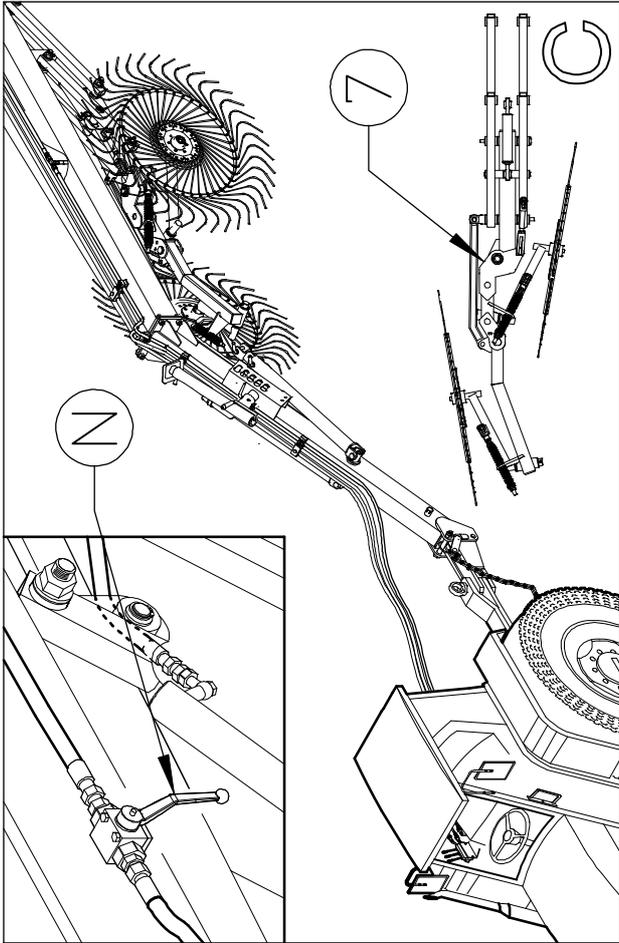

In this step, you will use:

Item 2: 2 pins $\varnothing 20 \times 35$ ($\varnothing 0.79'' \times 1.38''$)

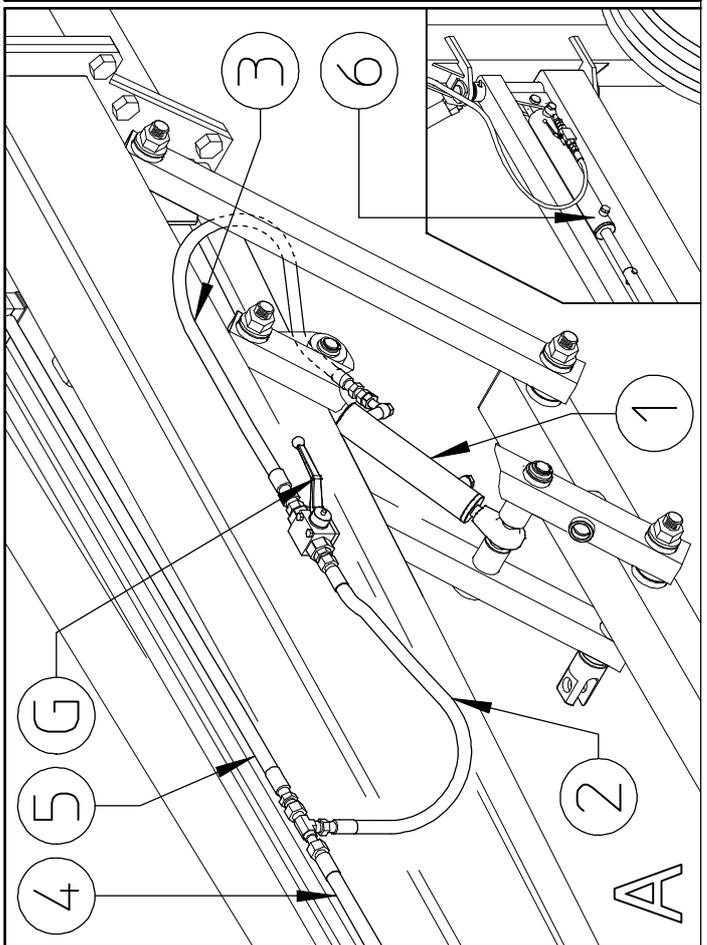

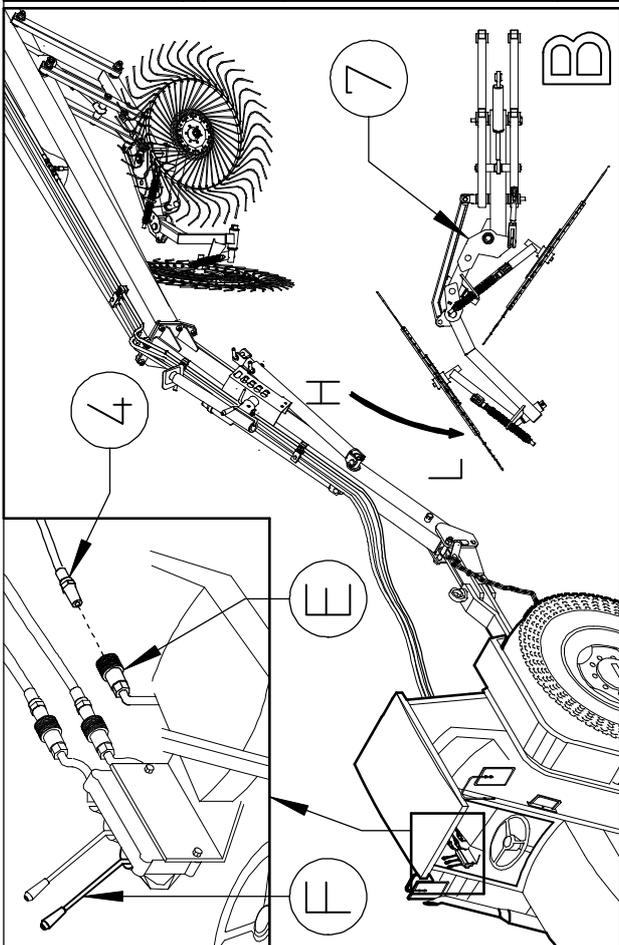

Item 3: 2 washers $\varnothing 13$ ($\varnothing 1/2''$)

Item 4: 2 nuts M12 (0.47")

At this point the assembly is completed and you can proceed with putting the kit into operation (see next step)

011-250.480

11) DANGER

All the instructions and recommendations found in the assembly, use and maintenance manual for the machine are valid also for the functional tests. The manual must be consulted every time you work on or with the machine.

General information

This kit is actuated by cylinder 1 (single acting), which receives oil from hoses 2-3 placed between hoses 4-5, which in turn are fed by the tractor's hydraulic circuit and go to actuate the rake wheel lifting cylinders 6 (see Box A). To activate cylinder 1, (and consequently also cylinders 6) hose 4 must be connected to the tractor hydraulic valve connection E (see Box B). Note: The drawings of the hydraulic connection E and the lever F are intended to give only a general idea of their shape and position. Each tractor has its own specific shape and location of these devices.

Putting into operation

Check that the valve is in the open position G (see Box A). Moving lever F oil is sent through the hoses to cylinder 1, which begins to extend and consequently the rake wheel section 7 begins to rotate from position H toward position L and to lift upward (see Box B) until reaching the transport position, in which the rake wheel section 7 is parallel to the drawbar and the rake wheels are well off the ground (about 350/400mm-14/16") depending on how springs 8-9 are adjusted (see Boxes C-D). The air is expelled almost immediately from the power circuit because cylinder 1 is small.

Adjustments

Springs 8-9 as adjusted by the manufacturer ensure a standard pressure on the ground suitable for most raking needs. You can make small adjustments to increase or decrease the pressure of the rake wheels on the ground by compressing or decompressing the springs 8-9. The more springs 8-9 (see Box D) are compressed (i.e. shortened by tightening the nuts 10 on the shaft 11), the more the rake wheels will exert pressure on the ground and, vice versa, the more springs 8-9 are decompressed (i.e. extended by loosening the nuts 10 on the shaft 11), the less they will exert pressure on the ground. In addition, the entire setup of the springs 8-9 and the related accessories can be moved along shaft 11.

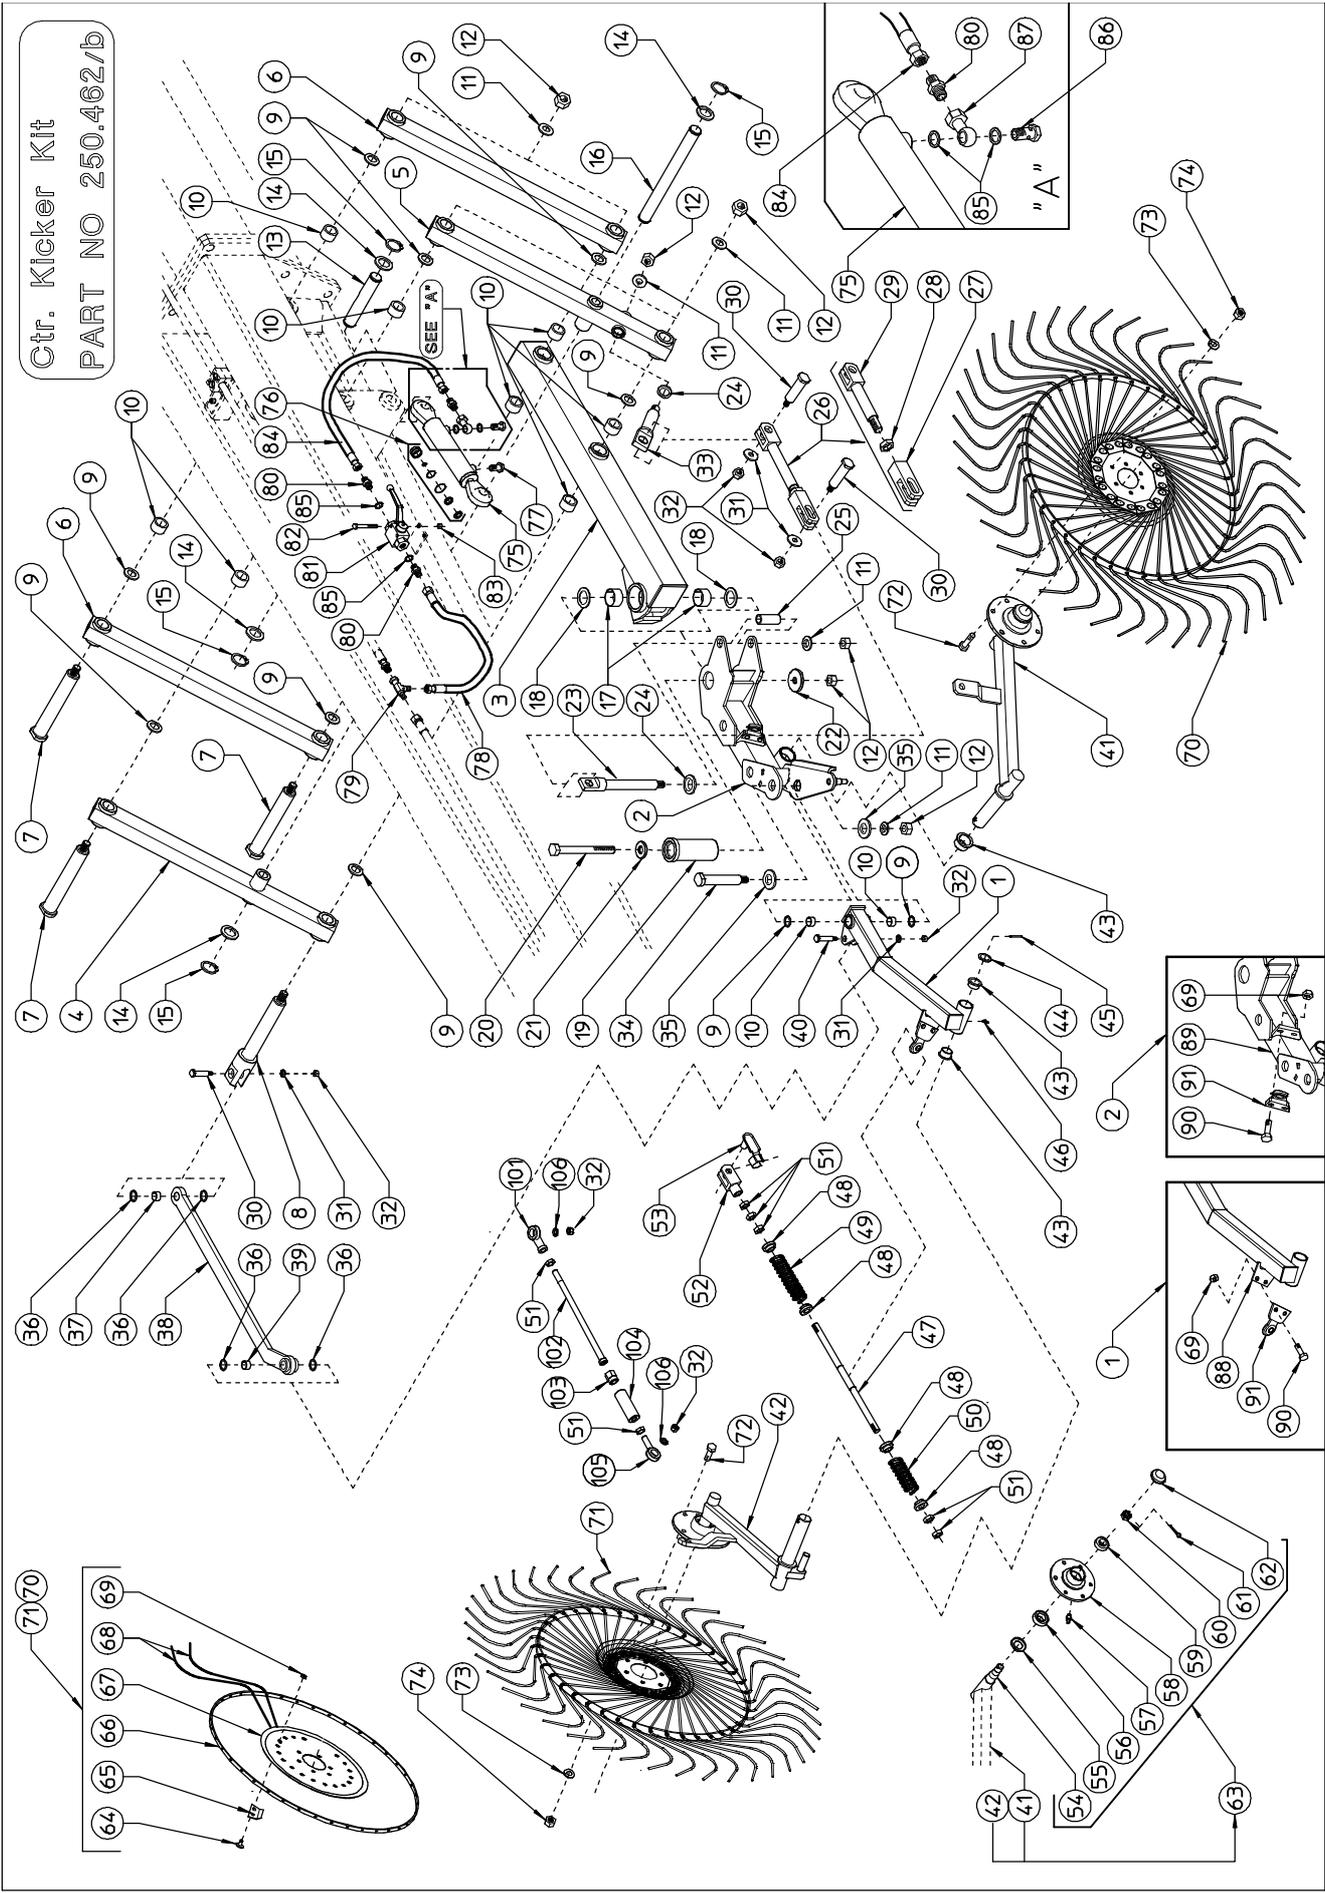

With the adjustment of springs 8-9 being the same, the smaller measurement M is, the heavier the rake wheels will be on the ground while working and the closer to the ground they will be during transport. Conversely, the larger measurement M is, the lighter the stars will be on the ground while working and the farther away from the ground they will be during transport. Note: Since the hydraulic kit is powered by the same hoses that provide power to the rake wheel cylinders, it will move whenever you operate lever F; therefore, before moving lever F, widen the lateral sections of the machine, otherwise the kit rake wheels will get caught in those of the lateral sections. Conversely, operate lever F and raise the kit rake wheels before closing the side sections. If you do not intend to work with the kit, once the central rake wheels are raised, put the valve in the closed position N (see Box C).

Transport

All the information given in the assembly, use and maintenance manual for the machine are valid also for transport operations. As specifically regards the kit, once the rake wheels are raised, remember to put the valve in the closed position N (see Box C).
